- **Modi Scupper(90°)** : 3" x 4"
- **Modi Angle Scupper(45°)**: 4" x 4"
- **Modi Curve Connectors (Elbows (Round or Square))**: 3" or 4"
- **Modi Scupper Screens**: 3" or 4"

MODI SCUPPER

The **Modi Scupper** is a versatile drain-outlet which can be used for both inside and outside drains, and for horizontal drains with free waterfall. Designed for parapets with 90° angles and completely compatible with modified bitumen (APP or SBS) and built-up roofing.

Installs easily: first line the scupper area with the roof membrane, position the scupper in place and secure it, then seal the flange with the roof membrane. Flexible flange permits easy positioning. The Modi Scupper protects your waterproofing work—water flows over the scupper keeping the flashing membrane underneath permanently dry. Installs like common metal scuppers but won't rust, corrode, warp or decay and membrane seals securely to the Modi Scupper. Lightweight and economical.

Also available: **Modi Angle Scupper** for use over cantstrip. Use in new construction or re-roofing whenever cantstrip is used.

ACCESSORIES: **Modi Scupper Curve Connectors** (elbows) with round or square connections to direct water flow to vertical downspouts or drain outlets. Connectors feature watertight rings for secure installation; **Scupper Screens** to prevent debris buildup in the scupper area.
